**ERRATUM****Paediatric genomics: diagnosing rare disease in children***Caroline F. Wright, David R. FitzPatrick & Helen V. Firth**Nature Reviews Genetics* doi:10.1038/nrg.2017.116 (2018)

In Figure 2a of the above article, the resolution of microarrays was originally stated to be 50-100 Mb. The actual resolution is 50-100 kb. In addition, the key for Figure 2b referred to 30,000 coding variants instead of 20,000. These errors have been corrected online. *Nature Reviews Genetics* apologizes for these errors.
