### Correction to: Journal of Human Hypertension

<https://doi.org/10.1038/s41371-018-0108-4>

The authors have retracted this article [1] because there are fundamental errors in the data presented that undermine the conclusions drawn.

Standard error was used instead of the standard deviation from two trials included in the meta-analysis. This has

seriously affected the overall effect. There have also been other inconsistencies noted in the values used in the calculations from the original studies.

All authors agree to this retraction.
